REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The prior art discloses a power output apparatus having a pattern storing unit that stores a plurality of output characteristics patterns in which the power is generated to the drive shaft, a pattern selecting unit that selects one of the plurality of output characteristics patterns stored in the storing unit and a drive controller. However, the prior art fails to show, in combination with the invention, a command generating unit that generates a command to drive the electric motor with a driving characteristic that exceeds a rated value of the driving characteristic of the electric motor and the controller being operable in response to the command from the command generating unit to add a predetermined output to the selected output characteristic pattern and control driving of the electric motor with the driving characteristic that exceeds the rated value for a limited period of time and a motor state detector that detects an operating state of the electric motor and a state determining unit that determines whether the electric motor can be driven with the driving characteristics that exceeds the rated value, based on the operating state detected by the motor state detector and the drive controller performs control in response to the command from a command generating unit depending upon a result of the determination made by the state determining unit.
